

ABSTRACT OF THE DISCLOSURE

- There is provided a system for realization of a base station controller in a compact PCI, which establishes a code division multiple access (CDMA) base station controller partly using functions of H.110. The system for realizing a base station
- 5 controller in a compact PCI uses paths for CDMA packet routines by using partial functions of H.110, extracts clocks from networks without using a GPS and composes a reference clock of the base station controller using the extracted clocks to use the reference clock as a reference frequency in CDMA.
